

Quality Manual Reviews

Product approval requirements at the national, state, regional, and local levels have undergone many changes in recent years. One requirement that is becoming more prevalent is independent verification that a manufacturer's quality assurance program satisfies minimum requirements and assures consistent production verified to duplicate tested samples.

Third-party review and validation of a manufacturer's quality assurance program by an accredited quality assurance agency can be a valuable asset in meeting the requirements of industry organizations. If a review or a validation of your quality assurance program would be of value to your company, contact Architectural Testing and ask how we can work together to satisfy your needs.
